

MINT MEDIA INTERACTIVE Software Systems is a full-service supplier of sophisticated software products for the aviation industry and other training intensive industry sectors, since 1998. Our flexible and modular training management system, **MINT TMS**, is based on innovative software technology and valued by aviation and non-aviation organizations all over the globe. Our goal is, to provide the **most modern and powerful toolset for training and records management**, to enable our customers to effectively plan, execute and analyse the training of their employees and optimize it to the greatest detail, to both increase cost and operational effectiveness.

MINT TMS is **trusted by more than 60 customers** all over the globe, some of which are the largest players of the aviation industry, for example Emirates Airlines, JetBlue Airways, Azul Linhas Aéreas Brasileiras, FedEx Express, Turkish Airlines, Japan Airlines, Lufthansa Group, and the Avianca-Taca group.

MINT has grown during the years and owes its success to highly committed employees and their cumulative and extensive experience in the aviation industry and its requirements, and of course to their expertise in software development, integration and implementation. Our team enhances and improves MINT TMS constantly and takes care of our customers and their individual needs around the clock, from various locations around the world.

We are currently looking for highly motivated software developers to join our team in our head-quarters in Kiel, Germany!

Position:

Senior Java Developer

Location:

Kiel, Schleswig-Holstein, Germany

Responsibilities:

In your role as a Senior Java Developer, you will support our existing international agile working team with further development of our innovative ERP solutions and our modern JavaFX clients and web clients. With your knowledge and experience, you will develop challenging features and support in the optimization and further development of our solutions. You work independently in all application sections and are involved in back-end and front-end development.

Qualifications:

- University degree in informatics or comparable education
- You have extensive knowledge and practical experience in Java, SQL
- You impress with good communication, team and presentation skills
- You have the ability to work independently and tackle tasks pragmatically
- You take much pleasure in complex tasks and have a high level of abstraction and solution capability
- You bring flexibility, innovation, capacity and the willingness to engage further education
- You must have good written and verbal communication skills in English

Preferred Skills:

- Knowledge in JavaScript, JavaFX, HTML, XML, XSD, XSLT, Python, Gradle, GIT, SVN
- Experience with tools like: JIRA, Eclipse, SQL Developer and Jenkins
- Knowledge about Agile frameworks such as Scrum
