First off, thank you for considering submitting an abstract to UCON 2023. Feel free to submit up to two ideas. Because customer presentations are a MINT UCON fan favorite and add value to the user community, we are looking forward to your ideas and abstracts.

Abstract Format & Submission

For your abstract submission, you'll need the following elements:

- Title
- Content Description (80-200 words)

For example, the CSE team gave a presentation on new v.14.2 features during one of our MINTinars. Their abstract might have looked like this:

Title:
Taking Advantage of New v.14.2 Features

Content Description:
Here at our organization, we used to see misleading information in the status column of the resource table when selecting multiple record items. The system would only show us a single status, and we couldn't filter for multiple statuses (e.g., wanting to see only resource record items with a problem, warning, or deactivated status). Additionally, we had no way to implement password complexity requirements because users couldn't be forced to change their password on a large scale without manual work. To solve both these problems, we utilized some of the features introduced in v.14.2 to expand the status column functionality and increase our system security by forcing users to change their password.

Once you have a title and description, please email your abstract by **Friday, March 31st.** We will review them based on relevance and innovative ways of using MINT TMS and get back to you by April 5th. If you are selected, you will receive a 50% discount code for UCON rates.

Previous Presentation Examples

To get the ideas following, look at this list of previous presentations. The UCON 2021 presentations are available for download.

- Object Keys and How to Automate Reports via Event Handlers (presented by Chuck Hagan (FTI) at UCON 2021)
- MINT ReportBuilder: Design for Exporting Simulator/Classroom Reservation Data (presented by Antti Toivanen (Finnair) at UCON 2021)
- MINT v.12 Migration Update & MINT Hacks (presented by Marianne O'Connor (then FedEx, now MINT) at UCON 2019)
- Automation Using Event Handlers (presented by TJ Rolland (JetBlue) at UCON 2019)
- MINT as Core System in Technical Training (presented by Gunnar Andersson (SAS) at UCON 2019)
