CHALLENGES

SR Technics continuously strives to enhance its operations. The traditional system of issuing paper certificates has become outdated - sending physical certificates worldwide is both time-consuming and costly. Moreover, manual signing and filing have led to unnecessary delays.

SOLUTIONS

To address the challenges of traditional certificate handling, we partnered with MINT to develop an EASA (European Union Aviation Safety Agency) approved Fully Digital Signature solution. This innovative system facilitates the digital creation, signing, and filing of certificates, seamlessly integrating into our workflows. It eradicates the necessity for physical certificates providing the flexibility of on-demand printing. Now, certificates can be generated, signed, and filed in just 3 minutes - a significant enhancement compared to the days-long manual process previously required.

FULLY DIGITAL SIGNATURE FOR CERTIFICATES

BENEFITS

1

Efficiency Boosts

The Fully Digital Signature solution significantly streamlines our certificate management process, cutting down the time from days to just 3 minutes and achieving unparalleled operational efficiency.

2

Cost Savings

By eliminating the need for physical certificates and optimizing workflows, the solution drastically reduces printing and mailing expenses, resulting in substantial cost savings for our company.

3

Flexibility and Accessibility

The ability for on-demand printing grants us unprecedented flexibility, enabling generation, signing, and filing of certificates as needed. This enhances our ability to meet critical deadlines with improved accessibility and responsiveness.
